Google play store games jio phone

Our list of best gaming phones for 2020 is your essential guide to the top handsets for gaming anywhere, pulled together by T3 experts (and trust us, we want to spend a lot of time playing games on our phones, so we know what we're talking about). While next-gen PCs and consoles may get most of the attention when it comes to gaming, gaming phones are improving all the time – you may be surprised by the detailed graphics and complex gameplay that you can now get on Android and iPhone devices. The internal components are getting faster, the screen is getting bigger, and now there are several specialized gaming phones on the market. The best gaming phones combine super-fast innards with simplified software to provide an incredibly immersive experience. It's a combination of qualities that we really like here at T3, and if you splash out on gaming phones then you've also got a premium device for all the other work that mobile phones need to do. If you are serious about your mobile games, read on for the best phone selection for 2020: we have chosen a variety of carefully curated phones aimed specifically at gamers and power users, giving you an excellent starting point for finding the best gaming phones you can buy. This is the best mobile phone game The best mobile games get better Razer definitely knows what it does when it comes to gaming, and it followed up an impressive Razer Phone with Razer Phone 2 which is more impressive. The screen is brighter, the speakers are louder, and there's more power under the hood to drive that frame rate on the most demanding games the Android platform has to offer. With a resolution of 1,440 x 2,560 pixels, the 5.7-inch screen is super sharp at 513 pixels per inch - and with a refresh rate of 120Hz, you shouldn't miss any of the action. Plus, the improved cooling system inside the chassis means the Snapdragon 845 processor and 8GB of RAM can actually work without overheating being a problem on the phone. Perhaps the improved IP67 water resistance and 12MP + 12MP dual lens rear camera won't be of much concern to gamers, but they mean the Razer Phone 2 will also do an excellent job when it comes to being a normal smartphone as well. Made for gamers, by gaming experts, this is a full stop of the best gaming phones for most users out there. (Image credit: Asus) The best gaming phones for crazy specs There are doubts that Asus ROG laptops are some of the best in business for gamers, and similar branded smartphones also do business. The third version of the Republic of Gamers handset brings a number of improvements, including 5G and better cameras, while also keeping everything we liked about the previous model. This phone is really stacked with power – it doesn't just come with the best CPU Android phone for 2020, you can also get it equipped with a whopping 16GB of RAM, which is a crazy amount. You may be able to run three games side by side in this case without any kind of slowdown. There's more to like too, including customizable buttons on the Asus ROG Phone 3 side and a special gaming mode in the software to ensure you always get maximum performance. The 6.59-inch display is also a real highlight, running at a refresh rate of 144Hz to ensure that the action on the screen always looks super smooth. (Image credit: Xiaomi) One of the best gaming phones for the better The latest handsets in Xiaomi's Black Shark game line are as impressive as the first two: packed with power and functionality, as well as a number of features that will appeal to people who want a superior portable gaming experience. It's hard to pick an error in whatever Black Shark 3 has to offer from a gaming perspective (and there's a Pro version too if you need a bigger screen). It's not a budget phone, but with a starting price of a little over £500 in the UK, it's very affordable considering what you get for your money - including a high-end Snapdragon 865 processor and an advanced cooling system. The 4720 mAh battery gives you plenty of time between charging as well, even when there are extended gaming sessions involved. With a generous 6.67-inch screen and plenty of RAM, as well as some striking ergonomics, this is undoubtedly one of the best gaming phones of the moment. We also love the official accessories on offer, including a clip-on charger that lets you keep playing while you rely on the handset, and a separate gamepad that makes it easier to control the game without touching the screen. (Image credit: Apple) The best gaming phones for Apple fans With extra flexibility and more in the way of customization options, most gaming phone attention tends to go to Android, but don't discount iOS completely – with fast blazing processors, strong graphics performance and tight hardware/software integration, the iPhone is also an excellent choice when it comes to picking up mobile gaming handsets. Which brings us to the iPhone 12, probably the best iPhone game of the lot right now. It has a generous 6.1-inch screen, like the iPhone 12 Pro - but since the Pro upgrades are

mostly in the camera department, you don't have to pay extra if you focus on the game. Of course the super powerful A14 Bionic processor also makes it ideal for gaming. From battery life to build quality, there are plenty of reasons to consider the iPhone 12 if you want the money the best gaming phone can buy. Hard to beat in terms of raw power, you have a great selection of games to choose from on iOS (including apple arcade subscription service), and it will work seamlessly with other Bits of Apple kit that you happen to set up around the house. (Image credit: OnePlus) Powerful 5G handsets that are excellent for gamersThere are not specifically marketed as mobile phones but let's calculate how the OnePlus 8 Pro is one of the best gaming phones of the moment: the giant, 6.78 inches for example, with curved edges and very small punch hole notch. Play sideways and it is perfect for playing games, with almost no bezels to distract from the action of the game. Then there's all the power and performance this phone is capable of, with the latest Snapdragon 865 CPU running inside and 12GB of RAM to ensure that your mobile games actually fly along. So fantastic visuals, fantastic performance, and fantastic audio as well, thanks to some very capable stereo speakers. The OnePlus 8 Pro also stands out for its 120 Hz screen refresh rate (to follow your favorite first-person shooter), as well as improved Game Mode to improve image quality and to improve haptic feedback. Game Mode can also block calls and notifications as you play, and it's part of the overall OxygenOS software experience that continues to impress. Subscribe to T3 print magazines today and save 50%! Can't get to the shops but don't want to miss the latest edition of the UK's best-selling gadget magazine? When you subscribe today, you'll get it for half the price – which means you'll get every problem T3 magazine sent straight to your door for just £2.50 a problem! See Deal(Image credit: Samsung)One of the best gaming phones out there stops fullFrom the three Galaxy S20 phones launched by Samsung, it's probably the S20 Plus that reaches a sweet spot as far as gaming goes - although you can choose to pay less for a standard S20 or more for the S20 Ultra, and you also won't be disappointed with your choice there. If you want to know more about the three handsets and the differences between them, check out our comprehensive guide. The Galaxy S20 Plus carries a super sharp 6.67-inch screen that looks fantastic, and very little in the way of bezels (a notch of small punch holes on the front screen should also not distract from your game). The screen refresh rate can also reach 120Hz, which is a bonus for the game. Then there are the components under the hood, which you will struggle to get better with one of the phones launched in 2020: an Exynos 990 processor or Snapdragon 865 (depending on where in the world you live), 8GB of RAM and 128GB of storage space (which can be expanded via a memory card). In terms of the best gaming phones out there, this is a very strong competitor. (Image credit: Sony) The best gaming phones for ultra-wide screensIf you're looking for the best gaming phone of 2020 then there's a lot to like about the Sony Xperia 1 II: not least the 21:9 aspect ratio, the 6.5-inch 4K resolution screen, which means the game will look vibrant and sharp whether you like space racers or brain puzzlers. Sony has packaged all kinds of technology into this phone, including HDR support for Dolby Atmos displays and audio so that your game (and movies) are guaranteed to be just as profound. Snapdragon 865 processor and RAM up to 12GB keep ticking well too, and this new is the introduction of 5G to the phone. Away from the game, the triple-lens rear camera is capable of doing some impressive shots as you get out and about, and comes with Android 10 on board as well – clean and mostly free of bloatware so you can continue your game. Definitely worth investigating for your next gaming phone. (Image credit: Samsung) Professional gaming phones are hitting hard in every other department, as well as Samsung's Galaxy Note 20 not messing around, what with its very fast internal components and a large 6.7-inch OLED screen - whatever game you fit on this phone will look great and run without the slightest pause. With 256GB of storage as well, you can get a lot of games installed before you run out of space. The integrated Stylus S Pen is of course a major selling point for the Note series, and can be useful in a variety of games, as well as for all the other tasks you can use (as a remote control for the rear camera, for example). Although this is an expensive handset, we think that it justifies the cost. It gives you more than enough power and space to handle any game you want to throw at the Galaxy Note 20, and thanks to its 4,300 mAh high-capacity battery, you'll have to finish a lot of games between costs as well. Recommended if you want a top-level gaming experience. (Image credit: Nubia) The best gaming phone for stylish games in goThe Nubia Red Magic 5G from Chinese outfit ZTE ticks a lot of boxes that you want to tick when you shop for the best gaming phones: it has a big, bright screen, it has a high-capacity battery, and it has special hardware buttons around the sides that mean you don't have to spend so much time tapping the screen and obscuring your view of the action. We should also talk about the display of mobile phones, as this is one of the best gaming phones we have ever seen in terms of overall aesthetics. The style is bold and insolent, with Eclipse Black and Hot Rod Red your color choices. People will notice when you pull this phone out of your pocket. Under the hood, we have an ultra-fast Snapdragon 865 processor from Qualcomm, which means even the most demanding games will run smoothly - with visuals aided by a 144Hz refresh rate display. Although it falls short in some areas (such as the camera), in the event that this game is an interesting device. Device.
